

**Never has the human  
wrist carried so much  
information before.**

---

## THE SEIKO RC4000

---

**The Complete Personal Data System.**

The RC4000 is a handsome and fashionable high quality product just as you would expect from Seiko. But it's a great deal more than just a watch.

You can enter virtually any type of information into the RC4000 and take it wherever you go. You can enter appointments, notes, price lists, telephone numbers, thousands of bits of useful information, all conveniently organised into up to 12 data files. And you can set the powerful reminder alarms for anything up to a year in advance.

Data can be uploaded or downloaded via most of today's most popular micro-computers through the RS232 interface or entered directly into the RC4000 itself.

It can even be transmitted directly from another RC4000!

To recall data you simply press a button and read the clear dot matrix display. To update you can either use the RC4000 alone or your micro. Data can then be saved for future use or printed out.

Both wrist and pocket models are available along with specially formatted software to make data entry simple.

Until you've used it you'd never believe you could carry so much useful information around with so little trouble. Once you've tried it, you'll never want to be without it.

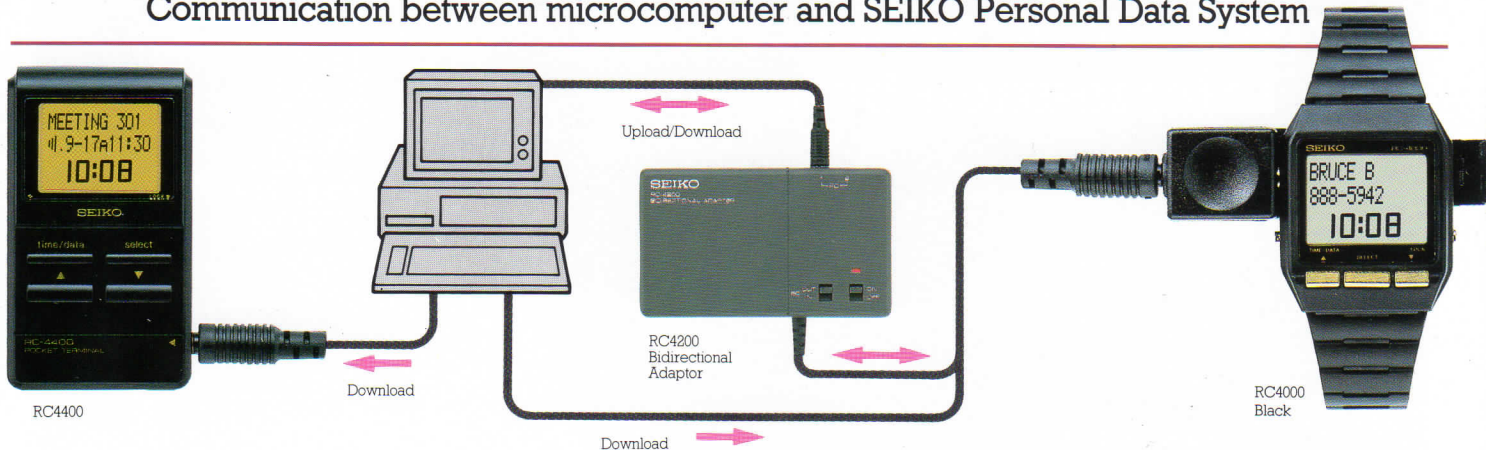

# THE SEIKO PERSONAL DATA SYSTEM

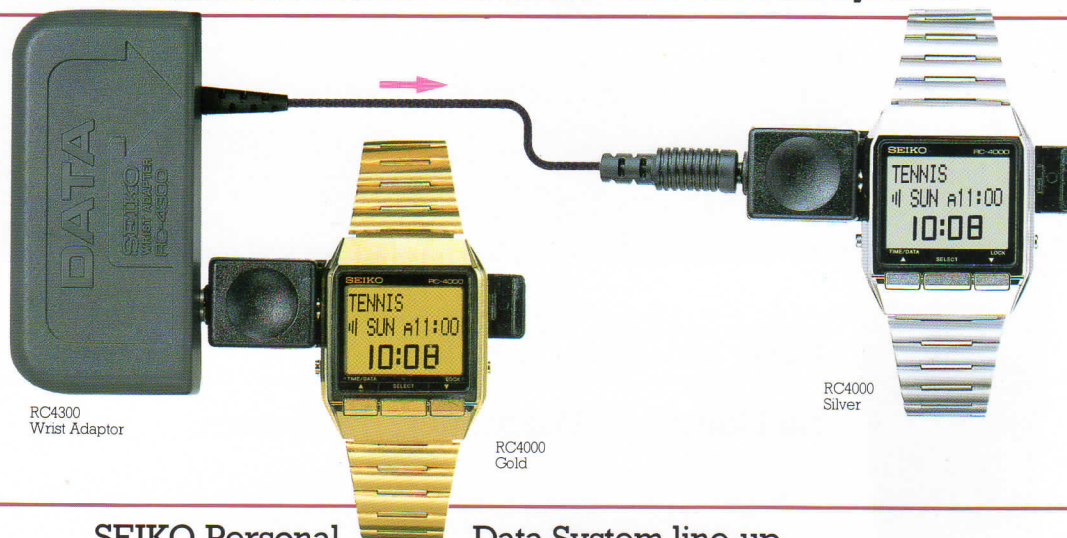

## The RC4000 Series – SPECIFICATIONS
